

MAHAD IQBAL

Email: mahadiqbal70@gmail.com | Phone: +91-8582892588 | Address: 38, Topsia 2nd Lane, Kolkata | [Linkedin](#) | [Github](#)

PROFESSIONAL SUMMARY

Aspiring AI/ML Engineer with hands-on experience in deploying machine learning models, data analysis, and full-stack web development. Skilled in Python, Flask, and React, with exposure to cloud technologies like Docker and GCP. Experienced in working with real-world datasets and building impactful projects such as AuraMed (smart healthcare) and Setuka (AI-powered tourist safety). Solid understanding of machine learning pipelines, model evaluation, and deployment. Actively strengthening data structures and algorithms (DSA) through LeetCode and coding challenges. Proficient in Unix/Linux environments and passionate about leveraging data-driven solutions to solve real-world problems.

EDUCATION

Bachelor of Technology, CSE-AIML

Heritage Institute of Technology, Kolkata

2023-2027

Class XII

Seventh Day Adventist Senior Secondary School, Kolkata

2022-2023

ISC Board, Graduated with 94%

Class X

Seventh Day Adventist Senior Secondary School, Kolkata

2020-2021

ICSE Board, Graduated with 94%

TECHNICAL SKILLS

Languages: Python, R, C++, SQL

Frameworks & Tools: Flask, Next.js, REST APIs, Docker, Git, Firebase, Google Cloud Platform

ML&AI: Scikit-learn, Transformers (BERT), OpenCV, Prompt Engineering, NLP, Computer Vision

Data: Pandas, NumPy, Power BI, Matplotlib, Seaborn

DevOps/Systems: Unix/Linux, Docker, CI/CD basics

EXPERIENCE

Generative AI Developer Intern at AI Wallah (Quirky Connections Pvt Ltd.) (July 2025 – Present)

- Developed MaveriqAir, a real-time environmental dashboard with AQI-based health insights, animated weather effects, and an AI chatbot powered by Google Gemini and AirVisual API.
- Built MaverickBot, a Next.js-based AI chatbot web app supporting context-aware chat, PDF-to-text parsing, and real-time Gemini 2.0 Flash responses using Radix UI and Tailwind CSS.
- Gained hands-on experience in LLM integration, Generative AI deployment, and building production-ready AI interfaces.

Data Science Intern at Pinnacle Labs (Dec 2024 – Jan 2025)

- Built sentiment analysis and text classification models using Transformer-based architectures (e.g., BERT) and traditional ML algorithms.
- Performed advanced text preprocessing, feature engineering, and model evaluation using libraries like NLTK, scikit-learn, and Transformers.
- Explored Generative AI use-cases and enhanced NLP workflows with Prompt Engineering and contextual embeddings.

PROJECTS

AuraMed – Smart Healthcare Platform: [Github](#) | [Demo Video](#)

- Hospitals face fragmented systems for patient data, emergency alerts, and resource management.
- Designed a unified platform to streamline hospital operations and enhance patient care.
- Led 3-member team to build a full-stack MVP using React, Flask, Firebase, and ML models (SVM, XGBoost); integrated geolocation-based SOS alerts, symptom prediction, and real-time resource tracking; containerized with Docker and deployed on Google Cloud Platform.
- Deployed full-stack MVP, winning 3rd place at Hack-O-NIT and selected as finalist at IIT BHU's Serve-Smart Hackathon; significantly improved emergency response time and hospital workflow automation.

Setuka – Digital Guardian on Every Journey [Demo Video](#)

- Tourists faced safety risks from fragmented emergency systems and slow response times.
- Develop "Setuka," an AI+IoT ecosystem, to provide real-time safety for travelers and a unified command dashboard for authorities.
- Architected the platform using React and Node.js, integrating wearable telemetry for live vitals and location. Implemented AI for risk prediction and a blockchain-based digital ID for secure verification.
- The system accelerates emergency response, enables proactive incident prevention, and increases tourist trust through enhanced safety and operational efficiency for authorities.

ACHIEVEMENTS

3rd Place at HACK-O-NIT Grand Finale by Narula Institute of Technology, Kritanj '25

Built "AuraMed," a smart hospital platform for symptom prediction, emergency alerts, and digital health records.

1st Runners Up (2nd Place) – IdeateX 2025 (GDG-IDEATEX-2025) by Google Developer Groups (GDG) On Campus, HITK | July 25, 2025

Recognized for developing MaveriqAir, a real-time web platform addressing air quality monitoring and urban flooding alerts in Indian cities. The solution demonstrated creativity, problem-solving, and real-world impact in the 'Bone Meal' track during the IdeateX 2025 Hackathon.
